

Hydrogeochemical Field Course: Environmental Contaminants in the Pacific Northwest

SOIL_SCI 502 (1 Credit), June 19 – 23, 2017

Instructors: Mohammed R. Islam, Ph.D. (islam@wsu.edu; 509-432 9547)
James B. Harsh, Ph.D. (harsh@wsu.edu; 509-335-3650)

- *SOIL 502 is a hydrogeochemical field course that provides an intense one-week field training in environmental geochemical/hydrogeochemical/biogeochemical problems such as the fate and transport of toxic/heavy metals, radionuclides and organic contaminants at selected sites the Pacific Northwest.*
- *The course will introduce participating upper level undergraduate and graduate students in environmental, biogeochemical, biological, soil, geological sciences as well as chemical and civil & environmental engineering disciplines to field methods that are used to define and characterize environmental field problems.*
- *An optional companion course—SOIL_SCI 503—will introduce modern methods of analyzing contaminated samples collected on the field trip.*
